

Student Instructions

1. Start a new Google Slide, Delete the text boxes to create a blank slide.
2. Draw a ball using the shape tools

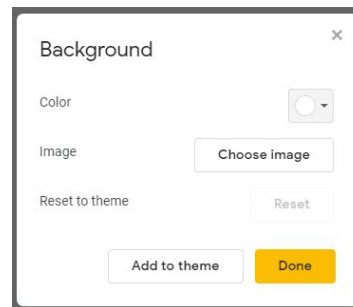

or add a ball by searching the Internet.

Soccer Ball

and add a background.

3. Next duplicate the slide. Slide → Duplicate Slide

Student Instructions

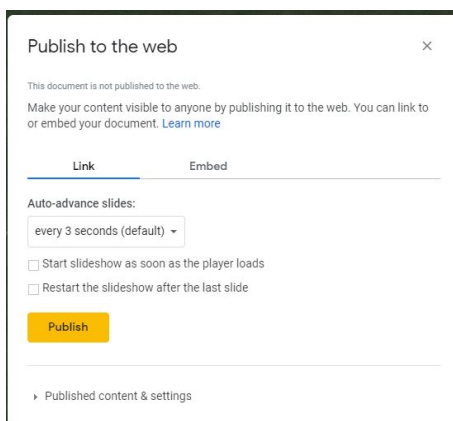

4. Move the ball a little and then duplicate the second slide. Continue duplicating slides and moving the ball a little each slide.

5. When the ball reaches an edge, have the ball “bounce” off the edge and move it in a different direction. It’s best to have the ball squash and stretch when it hits the edge to give it a more cartoony look.

6. Once you’ve created all of your slides you’ll publish the slides to the web so other people can see it. It will take 10 slides for one second of animation so you will need 100 slides for 10 seconds of animation. File → Publish to the web...

Student Instructions

7. Copy the URL (Control + C), open a new tab, and paste the URL in the new tab (Control + V)

8. The slideshow is set to run one slide every 3 seconds, which is much too slow for animation. We need each slide to last about 1/10 of a second. To do this we change the timing in the URL. Look for "delayms=3000" in the URL. Change the 3000 to 100 and then click Enter.

9. To run the animation click the play button.
